

# TRUSTEE OF THE NUDGEE TRUST FUND

## Theory of Change template

### THE PROBLEM WE ARE TRYING TO ADDRESS

*Improve access to orthopaedic robotic surgery to people in regional Queensland by leveraging fundraising*

### IF WE

Access seed funding and use this as leverage we can raise enough to acquire the robot	Partner with the equipment supplier we can leverage the capital purchase to reduce the cost of supplies	Collaborate with our public hospital partners to maximise the use of the equipment across public and private patients	Work with our clinicians to train and upskill them in the use of robotic surgery
---	---	---	--

### THROUGH

#### The use of evidence based clinical pathways for robotic surgery

Access to more accurate surgery Improved economic benefits from higher range of movement	Shorter stays in hospital reduced pain reduced risk of infection, reduced risk of excessive blood loss,	Being closer to home reducing travel costs to access treatments and increased access to family support whilst in hospital	Increased skills for clinicians and access to the latest technology making regional cities an attractive place to work
---	--	--	--

### THEN THIS WILL RESULT IN

50% reduction in the incidence of blood transfusion during surgery or post-surgery	40% reduction in pain (as measured by daily pain score, Day 0 – Day 3)	40% reduction in number of inpatient physiotherapy sessions	26% shorter stay in hospital
--	--	---	------------------------------

### AND EVENTUALLY LEAD TO

Improved patient outcomes	Growth in the use of robotic surgery in regional Queensland
---------------------------	---

Equals improved access for patients, better overall health outcomes and increased capacity for the hospital through shorter lengths of stay
